DETAILED ACTION

Claims

1. Claims 1-67 are pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 7-11, 27-31, 58-62 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a. Claims 7, 27 and 58 define the variable "m" however, "m" is not present in the Structure A or Structure B. For clarity, the Examiner suggests amending the claim language so that the following "m is defined as" deleted. If this suggestion is accepted, then "m" in claims 8, 28 and 59 should be deleted and replaced with "the ratio".

Allowable Subject Matter

4. Claims 1-6, 12-26, 32-57, 63-67 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter:

- a. The hydrophobic high molecular compound of Ohashi et al. (US 2002/0068241 A1) can have a sulfonated functional group (abstract; [0083]). There is

no teaching or suggestion of a sulfated functional group as specifically claimed in the present application.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. In WO 01/96119 A1, Hauck et al. teach a thermal digital lithographic printing plate comprising a hydrophilic substrate, an underlayer and an ink-receptive top layer comprising a solubility-suppressing component (abstract). One preferred group of polymeric materials that comprise polar groups and function as solubility-suppressing components are derivatized phenolic polymeric materials in which a port of the phenolic hydroxyl groups have been converted to sulfonic acid esters, preferably phenyl sulfonates or p-toluene sulfonates (page 20, lines 18-26).

b. In US 6,162,578, Zheng et al. teach an imaging member containing heat sensitive hyperbranched polymer (abstract).
